TMS to Target Tics and Compulsivity in Youth: What We're Finding and Where We're Going

Presenter: Christine Conelea, PhD

Introducer: Ann Haynos, PhD

Learning Objectives:

At the end of the presentation, participants will be able to:

- Understand how transcranial magnetic stimulation (TMS) can effect the brain.
- Describe the basic neurocircuitry underlying tics and OCD.
- Identify ways that TMS may potentially be used in combination with cognitive-behavioral therapies.
